Fight pathogens from the ground up

Minimizing the spread of potentially harmful pathogens is always a top priority in your facility—but has become even more important with the arrival of COVID-19. The pandemic has shone a bright spotlight on cleaning best practices, leaving many asking, “what do we need to do differently?”

This is what we and our EVS experts are here for: providing you with the tools and guidance you need to fight pathogens throughout your facility. We offer a comprehensive selection of products to tackle deep disinfection as well as everyday cleaning. We’ve highlighted some customer favorites here—talk with your Medline rep to find the ideal mix of products and solutions for your facility.

Follow CDC guidelines for cleaning and disinfecting your facility¹

Clean

- Always clean and disinfect wearing disposable gloves
- Follow the two-step process—clean with soap and water to remove dirt and impurities, then follow up with a disinfectant to neutralize remaining germs
- Frequently touched surfaces must be cleaned on a routine basis
 - The more it's touched, the more often it needs to be cleaned
 - Public surfaces and objects, including keypads and countertops, should be thoroughly cleaned and disinfected prior to and between uses
- Pay special attention to high-touch surfaces, including, door knobs, light switches, handrails, tray tables, blood pressure cuffs, phones, toilets, sinks, towel dispensers, etc.

Disinfect

- When disinfecting, be sure to use disinfectants from EPA's **List N**², which are effective for use against SARS-CoV-2, the virus that causes COVID 19
- Following label instructions will help ensure safe, effective product use; additional recommendations include:
 - Maintaining a wet surface based on label instructions
 - Taking precautions like wearing gloves and ensuring proper ventilation while using the product
