

Innovate. Optimize. Secure.

Columbia Advisory Group is dedicated to sustainability. The company can help support your sustainability goals by:

- **Advising on ways that institutions may re-use and re-deploy equipment** that is still in good condition to cut back on waste, rather than “buying new” each time.
- **Working with authorized disposal services** when it is time to retire equipment that can recover usable components for further recycling, or safely donate to various charitable/social entities without the risk of exposing data. If equipment must be disposed of, CAG assures that disposal is handled so that harmful components aren’t contaminating landfills.
- **Exclusively deploying laptops**, since CAG is a highly-mobile workforce. Laptops are projected to use about 1/3 of the energy of desktop PCs, and they make use of fewer resources.
- **Advising on choosing energy-efficient equipment**, including laptops, monitors, and printers, with a preference for items that are Energy Star® certified.
