

Cenmed Chemicals, Stains + Custom Reagents

We provide quality chemical formulations that allow you to focus on what you do best: healthcare, research, and discovery. We manufacture custom chemicals and specialty products for labs and businesses. Our on-site technicians understand the daily needs of research and clinical labs, and our chemists and certified medical laboratory technicians use state-of-the-art equipment to formulate products to your exact specifications.

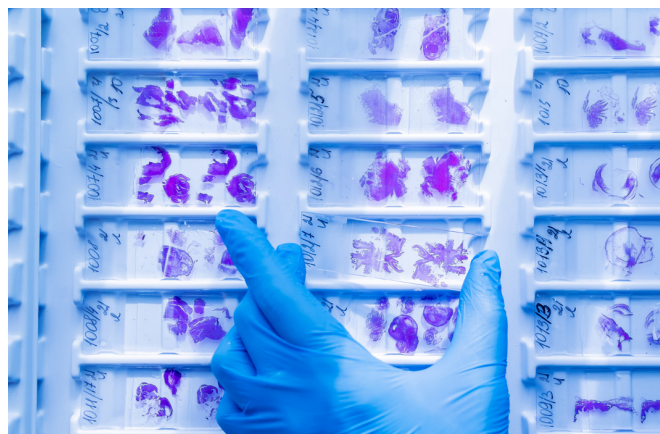

Your Solution for Custom Chemical Blending

Open Communication: Our chemists and project managers collaborate with you to understand your project's needs.

Custom Solutions & Packaging: We use our existing platform to create blends in your desired packaging.

Branded Products: We blend branded chemicals to your specifications and quality requirements, helping you launch your products quickly.

Fast Shipping: We stock your custom blends and ship them quickly, often within 24 hours of your order.

The Cenmed Difference

For over 15 years, Cenmed has provided customized diagnostic stains and laboratory reagents to clinical facilities and research laboratories around the world. We specialize in microbiology, hematology, cytology/histology, and pathology labs, but our experience and commitment to your success are limitless.

We manufacture high-quality chemicals at scale, meeting the needs of companies of all sizes, from Fortune 500 to small labs. We're also a federal contractor, serving U.S. government and military labs. Our safe, stable chemicals deliver consistent performance, so you get the best results. We use Biological Stain Commission-certified stains and provide Certificates of Analysis, Safety Data Sheets, and Instructions for Use for every chemical we manufacture.

Quality Assurance

Cenmed's focus on quality assurance and transparency means you have a trustworthy partner that ensures your success. We deliver a complete service that's tailored to your needs, no matter the scope:

- Maintaining the highest quality standards for every chemical we manufacture.
- Ensuring quality control measures from start to finish by conducting performance testing with actual specimens.
- Ability to handle small or large chemical and reagent projects.
- Our dyes meet the expected intensity and cellular component of differentiation criteria.
