

**DATABERG**

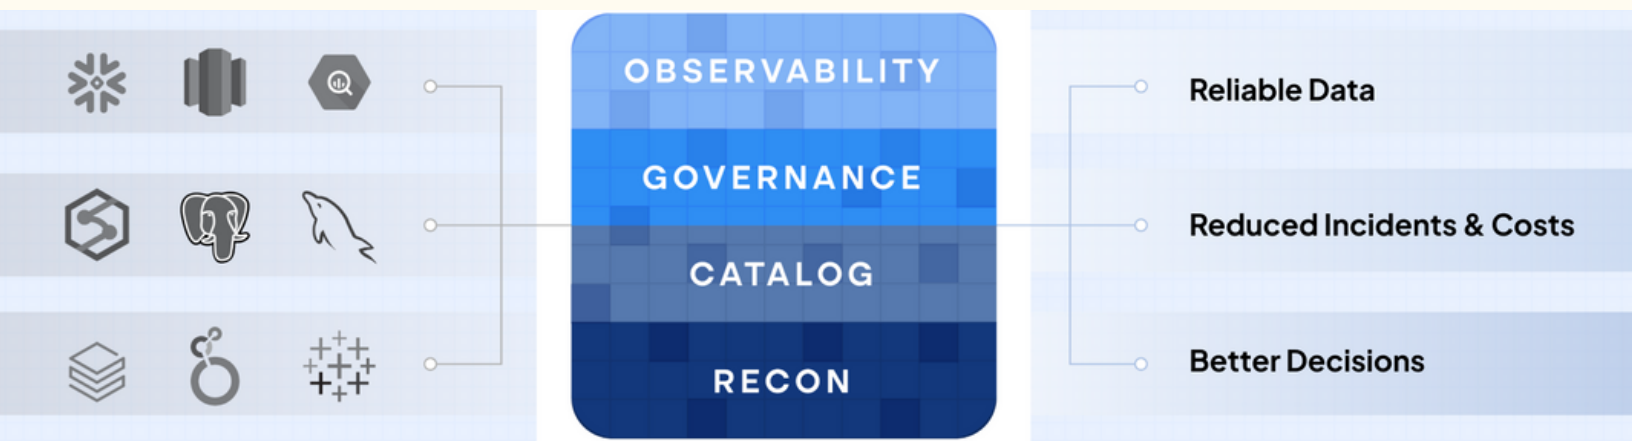

# **SEE WHAT OTHERS DON'T**

**DATA OBSERVABILITY FOR THE MODERN  
DATA STACK**

Databerg is an all-in-one package solution for data observability, catalog and governance. We provide a feature-rich solution for organizations who want a unified solution for their data stack for different groups of users to discover, curate and collaborate on data assets all in one place

Here's what you can expect after using Databerg :

- Spend **less time fire-fighting** data incidents and build trust with internal stakeholders from reliable data.
- **Discover your data** using a variety of strategies, including: keyword search, data associations (e.g., frequently joined tables, lineage), and complex queries.
- **Change activity** feed that enables you view a summary of data change events. The entities in the activity feed are clickable including tables, dashboards, team names, etc.
- Trace the path of data across tables, pipelines, and dashboards using **Data Lineage**
- **Build trust** in your data by creating tests to monitor that the data is complete, fresh, and accurate.
- **Data profiler** enable you to check for null values in non-null columns, for duplicates in a unique column, etc.
- **Integrate** your database, dashboard, messaging, and pipeline services via. web based UI

Unlock the value of data assets with an end-to-end metadata management solution that includes data discovery, governance, data quality, observability, and people collaboration.
