

# Equipment Maintenance Management Solution

Cenmed's Equipment Maintenance Management Solutions (EMMS) provides asset management for a broad range of laboratory equipment under one service agreement. As a laboratory, healthcare, and federal asset manager, Cenmed provides a single contract for managing service events by leveraging qualified providers.

## Our Solutions

Cenmed provides a full range of services, including on-site or off-site repairs. Our solution gives the flexibility to ensure your operations succeed.

Cenmed's approach to equipment management:

- **Maximize** availability of lab equipment.
- **Make sense** of maintenance cycle and operational needs.
- **Ensure** that critical maintenance is consistently handled on a scheduled basis.
- **Create** an effective framework that provides scheduled maintenance and resources to keep all equipment running effectively.
- **Protect** lab operations from lost time due to down equipment.

## Impactful Service, Innovative Management

We enhance traditional service agreements by standardizing service delay across a broad range of equipment while incorporating OEM + ISO technicians under a single agreement.

## Equipment Management Process

As labs grow, the need for equipment grows. Managing logistics is far more than just asset management; it entails a planned approach to equipment that begins with installation and concludes with replacement and decommissioning. In between, the life cycle encompasses periodic calibrations and monthly maintenance and repairs.

## Why Choose Cenmed?

Our solution supports your operations by ensuring equipment is available when you need it. With 30+ years of experience serving healthcare organizations, research laboratories, government facilities, and universities, Cenmed delivers efficient and responsive equipment maintenance management meeting all your needs.
