

Erlab has been providing protection for laboratory personnel for 50 years with our advanced filtration technology products. Our ecosystem, which includes Captair SMART filtering fume hoods, Captair SMART filtering storage cabinets, and Halo air filtration systems, provides a solution to increase the level of safety wherever chemicals are used and where emissions create safety concerns. While providing additional benefits such as:

- The ability to design your lab with flexibility
- Significant savings on annual energy cost
- Reduction of installation cost by 90%
- Real-time communication of all performance criteria
- Advanced filtration technology - one filter for all chemicals
- Annual energy savings of \$5,000, per hood
- Increased safety with an ecosystem of products, protecting you throughout the life cycle of the chemical

Erlab's filtration technology is used in University labs, Research labs, Pharmaceutical labs, Trace Metal labs, Chemical Wet labs, Biotech labs, General purpose labs and more.

Erlab's filtration provides a holistic approach with an ecosystem of safety that captures and detects emissions throughout the life cycle of the chemical. We provide guaranteed safety with over 650 approved chemicals tested to ensure compliance with the AFNOR NFX 15-211 standard. Each handling application is individually validated by Erlab for performance efficiency.
