Introducing the Nikon ECLIPSE Ci-L plus Upright Microscope

Nikon’s new ECLIPSE Ci-L plus offers innovative ergonomic features, durability and advanced optics wrapped into a sleek, compact design.

Key Features:

- LED illumination system including Nikon’s fly-eye lens for increased uniformity of brightness across the field of view.
- The Light Intensity Management (LIM) system provides automatic adjustment of illumination intensity when switching objectives to maintain defined brightness levels.
- The status display automatically updates with current magnification and illumination intensity levels.
- When engaged, the ECO mode automatically powers down the microscope after a period of inactivity.
- The Ci-L plus uses the same condenser, stage, objectives, intermediate modules, and eyepiece tubes as the Ci-L microscope.
- A variety of contrasting techniques are supported, including:
  - Brightfield
  - Phase Contrast
  - Simple and Color-Sensitive Polarized Light
  - Darkfield
  - Epifluorescence
