# Paperless Operations

## Business Challenge

Customer was highly reliant on paper documents for requisitions, invoices, and supplier information. This was creating not only a physical storage issue, but an increased risk around audits and data integrity.

## Approach to Solve

- Consolidate all purchasing documents to one unified system.
- Implement dedicated workflows to track all document history in one consolidated, easy to access system.

## Solution

- Implemented eProcurement with forms and invoicing workflow to digitize their current paper-based process.
- Utilizing the supplier portal to track key supplier information.

**“We used to be a completely paper organization. We would stack boxes and boxes on paper files; we even had a dedicated storage room just for paper documents. This year, I haven’t had to move a single box... Now we are able to use this space for other projects.”**

Director of Procurement
