

Flow Middleware License (Add-on)

The Pathify Engagement Hub deploys “out of the box” with everything needed to dramatically improve how students and staff interact with technology, people and content. Embracing the concept of personalization not just at the user level — but also at the institutional level — Pathify provides deep software customization capabilities enabling schools to further imprint their unique identities throughout the Pathify platform.

For schools with JavaScript developers wanting to build integrations, widgets and more outside the Recipe Library, Pathify provides access to the proprietary middleware Flow. This capability enables schools to integrate information from any system — not just the SIS and LMS — surfacing it within the Engagement Hub, while also creating unique options around page creation, communication options — and a whole lot more.

The Engine

Flow operates in Massively Multi-parallel Scala (MMpS) to process enormous data volume.

Custom Content

The content layer allows developers to build dynamic web pages and integrated widgets, synchronizing captured data.

Flows

Flows provide the logic directing data, facilitating creating everything from basic workflows to complex integrations.

Middleware Chops

Perfect for JavaScript developers (who like to tinker) and IT shops with integration experience.
