

Ellucian Procurement CIO SUMMARY SHEET

Harmonize both operational and strategic priorities to meet the demands of the future

As the role of the CIO continues to evolve, balancing operational and strategic IT priorities will remain critical for the future.

Technology has proven vital to weathering uncertainty during the digital transformation post-pandemic.

As colleges and universities lean more heavily on their IT functions, their chief information officers (CIOs) are undergoing their own evolution as they reimagine their roles and responsibilities and become thought leaders in higher education.

The CIO plays a key role in charting the future of digital transformation for their institution. And today, many serve as a strategic partner for their institution. The role of the CIO is continually changing, helping the institution to compete for students, support their employees, and adhere to sound financial practices.

The modern CIO must harmonize operational and strategic priorities to meet the demands of the future.

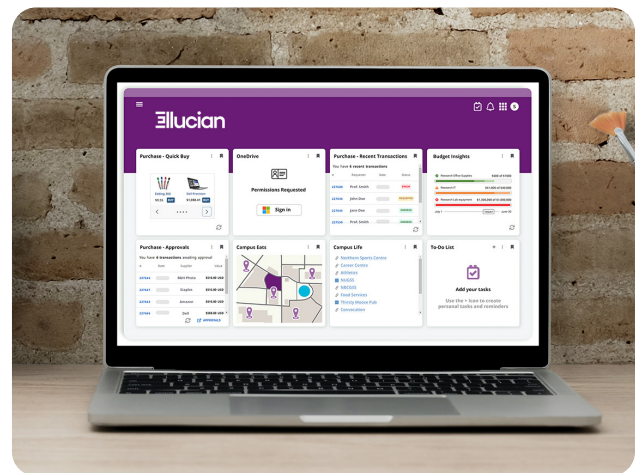

Connect:

Connect people & communities to the resources they need.

Collaborate:

Unify functions across your campus.
