

Multi-Target Temperature Detection Camera

Leading AI and Thermal Technology

- Complete 16 target temperature measurements within 30 milliseconds at a distance of 10-15 ft.
- Temperature accuracy $\leq 0.6^{\circ}\text{F}$

Advantages Compared to Traditional Systems

- Maximum 16 people can be measured simultaneously within 30 milliseconds
- Dynamic real-time continuous detection
- Intelligent automatic temperature detection

Smart NVR

- Integrated with face recognition
- Suitable for single-point emergency deployment and small or medium-sized project selection

Thermal Camera

- Temperature measurement accuracy $\leq 0.6^{\circ}\text{F}$
- Supports up to 16 targets at the same time
- Temperature measurement response time $\leq 30\text{ms}$
- Best distance for measurement: 10-15 ft.

Blackbody

- Blackbody is a standard temperature source used for temperature calibration
- Blackbody normalizes environmental factors to provide real time calibration of temperature readings
