Product Information

- Feature 4-stage filtration, including two particulate filters, an activated carbon adsorption filter, and a HEPA filter
- Fast and safe – effectively remove contaminants from the air, such as smoke and smoke odors, drywall dust, dirt, asbestos fibers, metal fumes, bacteria, paint and varnish odors, and gases
- Operate in three different methods: recirculation, negative pressure, and remote location cleaning
- Available in several sizes (500 to 4,340 CFM) to effectively treat any size home or building
- Units include casters for extra portability
- Ideal for mold abatement, disaster restoration, construction and renovation projects
- By continuing to operate the air scrubber after the project is complete, you can remove residual odors and contaminants

Portable Air Scrubbers

WE'RE HERE TO HELP "CLEAR THE AIR" AFTER A FIRE!

Sunbelt Rentals offers rental solutions for all your immediate disaster restoration needs. Our portable air scrubbers are ideal for homeowners and contractors dealing with the effects of fire, smoke or water damage. These events and their subsequent restoration activities often release harmful contaminants into the air, which air scrubbers can safely and effectively remove.

The three different methods of portable air scrubbers: Recirculation, where the air scrubber continuously cleans and recirculates air within a local area; Negative Pressure, where the air scrubber operates inside the containment area and filtered air is exhausted outside using flexible ducting; and Remote Location, where the air scrubber operates outside the containment area and flexible ducting draws contaminated air out of the containment area.
