Utilizing Business Analytics to Improve Sourcing Events

Business Challenge

Client was looking for additional sourcing information to assist their data team in identifying suppliers that were awarded, diversity information as well as events that were associated with a contract. This information was not available to them within Business Analytics as a standard report. The CSM created a custom report for the team containing all the fields they requested and is currently being used by their analytics team to provide in-depth information on their sourcing events.

Approach to Solve

Client was looking for additional information within their reporting to track diverse suppliers, awarded suppliers, total contract value and contract header information within each sourcing event.

Solution

- Business Analytics Custom report was created.
- The report tracks sourcing and contract information.
- This information provides a full picture of their sourcing events and where they can improve.

“Thank-you for this report. It made our work so much easier.”
