

VENDOR MANAGED INVENTORY - CASE STUDY

COMPANY DETAILS

A global leader in diagnostic solutions specializing in transfusion medicine, donor testing solutions, clinical chemistry and laboratory consulting.

Industry: Medical Diagnostics

Company Size: 4,400+

Location: Raritan, New Jersey (Headquarters)

Ortho Clinical Diagnostics

PROBLEM:

Ongoing shortages for tubing causing manufacturing disruptions. OCD sought a partner capable of supplying large quantities of tubing and providing off-site inventory storage. Additionally, Cenmed would conduct manual inventory counts on a weekly basis to ensure that par levels were maintained.

PROPOSED SOLUTION:

Cenmed would take responsibility for overseeing the offsite and onsite stockrooms dedicated to OCD's inventory. By analyzing usage data, Cenmed would proactively procure a one-year supply of tubing in different sizes and lengths.
